

SmartDB Expands Offering to Include PeopleSoft Migrations

PeopleSoft-to-Oracle Toolkit to Help SIs and Developers Fast Track Clients Through Migration

ORACLE OPENWORLD, SAN FRANCISCO, Calif., December 6, 2004 – SmartDB Corp, the leading provider of professional tools for system integrators, today announced a release schedule for its new PeopleSoft to Oracle migration toolkit. The new SmartDB offering, named PS₂O, is being added to the SmartDB stable of products in response to marketplace dynamics and systems integrator (SI) requests. PS₂O can put PeopleSoft customers on a fast migration track and should become standard equipment for many of the larger system integrator organizations as well as internal IT organizations.

SmartDB's flagship product, SmartDB Workbench, is the tool of choice by systems integrators for Oracle upgrades and conversions. The imperative for using SmartDB is centered on the concept of risk reduction. Leveraging off of the SmartDB Workbench, PS₂O includes a runtime that serves as the engine for real-time data movement, a management console to graphically monitor and configure integrations, a selection of connectors for accessing any of the popular databases, and Workbench Studio, a Windows-based tool developers use to manage data conversions and build custom templates. Notably, SmartDB's PS₂O toolkit offers a comprehensive library of pre-built PeopleSoft Intelligent Adapters to automatically transform or migrate data.

By using SmartDB's Design Studio and extensive selection of pre-built adapters, systems integrators can save 35% to 50% of the programming time and related costs associated with upgrades and conversions. SIs benefit from SmartDB's performance and reliability by helping to remove the risk of missed deadlines and budget pressures.

By adding SmartDB's PeopleSoft to Oracle migration capability, systems integrators can put clients on a fast track to migration that reduces risk and much of the expense often associated with making significant core business system changes. SmartDB's Intelligent Adapters enrich, validate, format, and map data for migration between specific application modules. The combination of Intelligent Adapters and SmartDB Design Studio enables SIs to easily migrate data for HR, Financials, Manufacturing and other business application functions.

SmartDB President George Langan believes the company's significant commitment to the PeopleSoft community is well justified. "Systems integrators have come to know that SmartDB strives to stay ahead of the market curve and provide the right mix of products to help them best serve their clients. With the SmartDB PS₂O toolkit, SIs will be positioned to respond quickly with the proven SmartDB technology."

SmartDB will unveil PS₂O at the Oracle OpenWorld Conference. General availability of PS₂O is scheduled for January 15, 2005.

About SmartDB Corp

SmartDB Corp is the leading provider of integration toolkits with a specialty in Oracle upgrades and conversions. The SmartDB Workbench is a Professional Toolkit for Systems Integrators that includes a design Studio and an extensive library of pre-built Oracle adapters. SmartDB lowers project risk and reduces programming time and expense by 35% to 50%. SmartDB Corp maintains strategic relationships with Systems Integrators including CSC, IBM, Bearing Point, and Deloitte Consulting and has international distributors in Europe and Asia. More information about SmartDB can be obtained by visiting www.smartdbcorp.com.
